

KEY FOB CONTROLS

PAIRING DEVICES

Begin by holding a magnet to the front of the iQ cube. The cube will flash, indicating that it is now in pairing mode.

Now press the up arrow on the key fob remote to pair it with the iQ cube. The indicator light will stop flashing. Your devices are now successfully paired.

POWERING THE FREEDOMLIFT SYSTEM

Hold the power button on your key fob for **3 seconds** to power on the system. The iQ cube indicator light will turn from red to green when the system is on.

Hold the power button on your key fob for **half a second** to turn the system off.

The iQ cube light will change back to red, indicating the system is powered off.

AUXILIARY LIGHTING

In order to use the lighting button on the key fob, an additional iQ cube must be paired to the key fob.

Once this is done, you can operate both the lift and lighting using the single key fob remote.

OPERATING FREEDOMLIFT

Use the UP and DOWN arrows to raise and lower your lift. The lift will automatically stop when it reaches the highest and lowest point.
